

Indicators You May Need an RN

Difficulty understanding or adhering to medication

Pre or Post Operation Care

You are in need of wound care. Sometimes due to pressure ulcers, stasis ulcers, or lymphedema

You are in need of intravenous therapy

You need help with your health management due to diabetes, blood pressure, or chronic disease

You are at a high risk of hospital readmission due to multiple medications, a lack of support (live alone or no caregiver), or you frequently visit the Emergency Room
